

## Zebra Fish Capital, Singapore and Green In Future, Singapore sign Collaboration Partnership to Advance Nature and Agri-Food Systems

Zebrafish Capital

GREEN  
IN FUTURE

9<sup>th</sup> January 2026, Singapore — Zebra Fish Capital, Singapore and Green In Future, Singapore have formally signed a collaboration partnership to jointly advance nature-positive and climate-aligned initiatives across agri-food systems, carbon technologies, and the built environment.

The partnership is established at a time when global priorities are increasingly angled towards nature, food systems, and decarbonisation, driven by evolving policy frameworks, investment strategies, and national sustainability agendas. Agri-food systems currently account for nearly 30% of global greenhouse gas emissions, while global commitments to nature-based solutions and climate finance have exceeded USD 150 billion. At the same time, carbon markets are projected to surpass USD 50 billion by 2030, reinforcing the urgency for coordinated action.

Through this collaboration, both organisations will work together to create structured platforms for awareness, engagement, and execution, bringing together corporates, SMEs, investors, solution providers, and government stakeholders. The partnership will focus on three core areas: sustainable agri-food systems, carbon technologies and nature-based solutions, and low-carbon transitions within the built environment.

A key pillar of the collaboration is the promotion of cross-border collaboration, particularly across Asia and emerging markets. With Zebra Fish Capital's involvement, the partnership will draw on its core strength in ecosystem building, enabling connections between investors, innovators, institutions, and policymakers across geographies. This approach aims to facilitate regional knowledge exchange, market access, and scalable collaboration.

Green In Future will serve as the platform and execution partner, leveraging its strengths in media, consultancy, and programme delivery to drive awareness, convene stakeholders, and support the on-ground execution of initiatives. Through conferences, workshops, and knowledge programmes, Green In Future will translate complex global trends and policy developments into practical insights for businesses and SMEs.

Together, Zebra Fish Capital Singapore and Green In Future Singapore aim to contribute to the development of resilient, interconnected, and future-ready ecosystems, supporting long-term economic and environmental outcomes.
